

The Standard in Home Wiring™

How ONQ
MAKES
YOUR
HOME
8 WAYS
BETTER

What Is the OnQ Home Wiring System?

Simply put, OnQ is the wiring system for today and tomorrow—the wiring system for the electronic home. It uses high-performance cables that can handle all your electronic needs from TV to Internet access, from security to home automation.

The OnQ system has three main components:

The **service center** is the central hub where all cables originate and are run throughout the house. The service center contains modules designed to handle specific needs like video distribution, telephone and computer access, computer networking, and home management.

The service center allows all wiring to be installed in what's called a star configuration with home runs to all outlets. A star-wired system is the most flexible and most reliable system you can get. In fact, most businesses use the same type of system for their telephone and networking needs.

High-performance cables include RG 6 coaxial cable for video and Category 5 twisted-pair cable for telephone and data. These cables include all the performance you need for today and for new capabilities arriving at your home soon.

Outlets provide the means for you to make maximum use of your OnQ system. Plug in TVs, computers, entertainment systems, video cameras anywhere in the house.

With OnQ, you're wired for living.

1

Protect your family and home with advanced security.

The OnQ Home Management System supports your security needs, from fire and intruder detection to access to remote security-monitoring services. OnQ provides the framework for whatever level of security you desire.

With OnQ, you have the peace of mind that you and your family are safe and secure.

2

Distribute video and audio to every room.

Enjoy television and music your way, anywhere in your home. Whether you have cable or direct broadcast satellite, your OnQ system allows a video outlet in every room you want. From the home theater in your family room to a TV in the bedroom, OnQ makes it easy to distribute video throughout the house.

Want to use a video camera to monitor the baby's room? You can tune into the camera from any TV in the house. You can add a camera to the front door and see who's there.

3

Work at home with the same convenience you have at the office.

With OnQ, you're wired for work, too. Plug in your computer, fax machine, modem, and telephone, and you're connected to the world. Multiple phone lines? Simple with OnQ.

OnQ even makes it simple to create an in-home local area network, linking computers and their peripherals together so their capabilities can be shared.

4

Surf the net with ease.

OnQ has the power to supercharge your access to the information superhighway. From a regular modem to high-speed technologies like ISDN or DSL, the OnQ home wiring system is designed to handle them with ease.

Get all the benefits of the Internet with fewer hassles. So your kids can do their homework better. You can shop more efficiently. Make travel arrangements on-line. Follow up on personal interests and hobbies.

5

Tame energy costs through automated management.

The OnQ Home Management System allows you to gain sophisticated control of your heating and cooling for maximum efficiency and lower costs. You can automatically have the system cut back during the night while you're asleep or during the day while you're at work.

Then have it come back up just before you wake up or arrive home so that you get just the right temperatures. With zoned systems, you can achieve even greater efficiencies by controlling different areas of the house to match your lifestyle.

6

Control lighting for convenience, ambience, and safety.

With the OnQ Home Management System, you can control lighting throughout your home. When you're not home, you can set the lights to turn on and off in random patterns to give the house a lived-in look.

When you are home, you can control your lights for different times of day. Turn on lights before you get up on a cold, dark morning or turn off lights after you've gone to bed.

Or you can set your lighting patterns for different needs, from minimal lighting for watching TV to maximum lighting for games and hobbies. Adjust the light to achieve just the right mood, easily and automatically.

7

Be ready for the next generation of electronic technology.

Because technology changes rapidly, you need a wiring system designed to handle whatever you throw at it, a system that won't become obsolete because it can't handle the new technologies like digital television, high-speed Internet access, or video-on-demand.

The OnQ system uses wiring that surpasses the needs of today so you're ready for the technology of tomorrow.

8

Enhance the future value of your home.

Imagine buying a home without cable, without a dishwasher, or without central air. Someday it will be just as unimaginable to buy a home without a home wiring system like OnQ. To make full use of the electronic capabilities that are increasingly part of our lives, you need a wiring system that can handle it with ease.

Installing OnQ today means your house is more saleable in the future.
